

Dmitry Paramonov

Male, 42 years old · born May 15, 1984

forestplus@ya.ru

Telegram: <https://t.me/TopDevOps>

Location: Saint Petersburg, Russia

Citizenship: Russia · Work authorization: Russia, UAE

Open to relocation: Moscow · Open to occasional business trips

DESIRED POSITION

DevOps Team Lead

Also open to: DevOps Engineer · CTO · CIO · Product Manager · Methodologist

Employment type: full-time, part-time, project-based/freelance

Work format: remote, hybrid, on-site

WORK EXPERIENCE — 17 YEARS 3 MONTHS

June 2023 —
December 2025
2 years 7 months

DevOps Team Lead

Crypto Industry International, UAE

Organized, managed, and developed the company's DevOps processes.

- Ensured stable operation of the microservices infrastructure; led incident management for outages and emergencies
- Contributed to software architecture design together with IT product owners and information systems architects
- Developed development, testing, and maintenance guidelines; built out the production process for information systems
- Owned and prioritized the task backlog, managing delivery and rollout to production
- Organized hiring, onboarding, and training of technical specialists
- Implemented and maintained CI/CD processes and automated systems for scaling and managing IT infrastructure
- Developed the server administration and infrastructure scaling strategy
- Set up monitoring of performance, availability, and overall health of the IT infrastructure

April 2021 — June
2023
2 years 3 months

Lead DevOps

Innotech Group, Moscow, inno.tech

Key client — VTB Bank (PJSC). Led the DevOps function across two major business streams.

“Merchant Services” stream (acquiring for small and mid-sized businesses): 9 microservices built on a microservices architecture (Java 8-11, Spring/Spring Boot, Maven, PostgreSQL; Docker to OpenShift; NGinx, React, NPM on the frontend).

— Led the migration of the entire infrastructure

(DEV/ST/IFT/LT/PRE-PROD/HOTFIX/PROD) to a new data center on VTB.Cloud

— Built a continuous build-and-delivery pipeline for microservices on TeamCity CI/CD + OpenShift Templates, integrated with the bank's omnichannel platform

— Organized effective collaboration between development, deployment, QA, and operations teams; standardized security and access-level policies

“Government Services in Banking Processes” stream (Federal Notary Chamber): 12 microservices.

— Migrated CI/CD pipelines to the bank's unified DreamPipe standard (TeamCity + Helm Charts, DevSecOps best practices)

— Migrated messaging from IBM MQ to Apache ActiveMQ Artemis and the database to a PostgreSQL cluster (Astra Linux)

— Built out the CI/CD process across the chain DEV to ST to IFT to LT to Pre-Prod to PROD

Also produced training materials and process guidelines, ran demo sessions, and took part in security audits and acceptance testing. Actively participated in the internal “DevOps Leaders” community, mentored Junior/Middle specialists (Buddy program), and contributed to hiring.

Tools: Docker, OpenShift/Kubernetes, TeamCity, SonarQube, Fortify (SAST/DAST), PostgreSQL, Apache Kafka, Sonatype Nexus, Bitbucket, Jira, Confluence, VTB.Cloud

December 2018 —
April 2021
2 years 5 months

Senior DevOps

DELL, Russia, dell.com

Part of the Pipelines team, responsible for development infrastructure and automation.

- Administered the Atlassian Stack (Jira, Confluence, Bitbucket): project configuration, upgrades, backups, Jira ↔ GitHub Issues integration; contributed to the migration to GitHub Enterprise
- Audited legacy infrastructure and delivered a roadmap for modernizing the technology stack
- Built a company-wide responsibility matrix across the entire technology stack
- Deployed an enterprise-grade backup and disaster-recovery system (UrBackup)
- Wrote Ansible playbooks and roles to automate routine operations
- Administered Jenkins: installation, plugin configuration, build automation
- Containerized applications with Docker/Docker-compose
- Built and configured Kubernetes clusters from scratch (kubeadm) in a hybrid Azure + VMware ESXi cloud; integrated K8s with GitLab CI/CD; managed Pods, Deployments, StatefulSets, Ingress, ConfigMaps, Secrets, Helm
- Set up monitoring: Prometheus + Node exporters, Grafana dashboards, Alertmanager

Regularly collaborated with distributed teams in the US and India (conferences, demos, alignment meetings).

February 2018 —
August 2018
7 months

Middle DevOps

FINOM, Saint Petersburg, finom.io

Built DevOps processes from the ground up for a group of companies in the crypto industry.

- Deployed and maintained: a cloud mining service, the company's main portal, a trading terminal for crypto exchanges, and landing pages for related services
- Built CI/CD on GitLab (Test to Pre-Prod to Production); set up monitoring with Nagios and Zabbix
- Migrated Jira and Confluence from Atlassian Cloud to self-hosted servers with Active Directory authentication; rolled out Self-Service Password and the TeamPass password manager
- Set up data backups to Amazon S3

Tools: CentOS/Ubuntu, NGinx, Apache, Node.js, Vue.js, PHP-FPM, PostgreSQL, MariaDB, Cloudflare, Let's Encrypt, Docker, Ansible

February 2017 —
August 2017
7 months

DevOps

ProfiT Solutions Networking Telecom, Saint Petersburg, dodidone.com

- Implemented ITSM/ITIL on GLPI
- CI/CD on Jenkins; administered the Atlassian Stack (Jira, Confluence, Bitbucket)
- Administered VMware ESXi, Docker/Docker-compose + Portainer
- Infrastructure monitoring: Nagios, Zabbix
- Linux/Windows administration, database administration (MariaDB, MySQL, PostgreSQL, MS SQL)

March 2016 —
February 2017
1 year

Founder (CEO & CIO)

IThelperSPb, Saint Petersburg, own venture

Ran an independent IT consulting practice.

- Delivered cloud IT solutions on Microsoft Azure for private companies (VPS, consulting, Windows/*Nix systems administration)
- Implemented ITSM/ITIL processes: incident, configuration, and license management, automated asset inventory
- Set up monitoring (Nagios, Zabbix, Cacti)
- Built websites and online stores, deployed corporate portals and CRM systems; SEO and SMM promotion

December 2014 —
March 2016
1 year 4 months

Senior Systems Administrator

United Wagon Company, Moscow, uniwagon.com

Audited the existing IT infrastructure and led its modernization.

- Restructured Active Directory (organizational units by department, more flexible GPO management); configured additional MS Exchange databases
- Implemented virtualization on VMware ESXi and deployed Linux services: the GLPI ITSM system, monitoring (Nagios, Cacti, Zabbix over SNMP), the Squid+LightSquid proxy server, and the Openfire XMPP server
- Launched a corporate portal on ONLYOFFICE and the Odoo ERP system

January 2012 —
December 2014
3 years

Co-Founder (CEO & CIO)

Mikrozaymfinans LLC, Moscow

Built the business from the ground up — from company registration and licensing with Russia's microfinance regulator through to full operational launch.

- Built the company website with an online micro-loan application flow and calculator; set up SEO and social media presence
- Implemented a CRM system to automate business processes; built out IT infrastructure (hosting, databases, email) and analytics platforms
- Negotiated agreements with credit history bureaus, a debt collection agency, and legal counsel
- Managed staff and the full operational cycle of the office

January 2011 —
December 2011
1 year

Chief Systems Administrator

T-Bank (Tinkoff), Moscow

- Owned systems administration of the company's Windows/*Nix IT infrastructure and business process automation
- Implemented monitoring and alerting systems for outage detection; reduced risks related to banking software operations
- Prepared technical specifications and documentation for new projects; oversaw rollout of solutions to production

Scale: 250+ servers, 1,200+ users, 4 data centers, team of 6

February 2008 —
January 2011
3 years

Deputy Head of IT Department

LEXPRO LLC, Moscow, lexpro.ru

- Rolled out MS Project Server and Team Foundation Server across the holding company
- Built a new office's IT infrastructure from scratch (~50 PCs): LAN, telephony, internet, software licensing
- Set up storage and automated backups (Symantec Backup Exec, HP tape library, Promise NAS)
- Implemented virtualization on MS Hyper-V with physical-to-virtual server migration via SCVMM
- Reorganized the domain and ensured stable 24x7x365 operation of critical services (MS SQL, WSUS, CRM, Linux servers)
- Aligned IT strategy and budget; built relationships with key vendors

Scale: 40 servers, ~500 users, 6 offices, team of ~12

EDUCATION

Higher education, 2006

Saint Petersburg State University of Aerospace Instrumentation
Computers, Systems and Networks — Software Engineer

Professional development:

2006 — “Deploying a Microsoft Windows Server 2003 Network Infrastructure,” SOFTLINE

SKILLS

Languages: Russian — native; English — B2 (upper-intermediate)

Core skills: DevOps · Ansible · CI/CD · Kubernetes · Docker · OpenShift · Linux (CentOS/RHEL) · Windows Server · PostgreSQL · MySQL · Nginx · Atlassian Jira/Confluence · DevSecOps · SRE · ITIL/ITSM · team leadership · backlog management · roadmapping · process automation · organizational skills

Virtualization & Containerization

Docker, Docker-compose, LXD/LXC, Vagrant, Kubernetes, Kubespray, OpenShift, VMware ESXi, MS Hyper-V, Proxmox, KVM

Cloud & VPS

MS Azure, AWS, Yandex Cloud, DigitalOcean, Scaleway, OVH, Hetzner, Bare Metal as a Service

Linux / OS

RHEL, CentOS, Fedora, Ubuntu, FreeBSD — iptables, Fail2Ban, FirewallD, GLPI (ITSM)

SCM / CI-CD

GitLab, GitHub, Bitbucket, SVN, Jenkins, GitLab CI, TeamCity

Automation & Scripting

Ansible (playbooks, Ansible Galaxy), Bash, Python, PowerShell, Groovy

Data & Messaging

PostgreSQL, MySQL/MariaDB, Apache Kafka, Apache ActiveMQ Artemis

Monitoring

Prometheus, Grafana, Alertmanager, Zabbix, Nagios, Cacti

Web & Networking

Nginx, Apache, Node.js, Vue.js, LDAP, VPN (OpenVPN)

MS Windows

AD, DNS, DHCP, GPO, WSUS, Exchange Server, IIS, SharePoint, MS SQL Server, PowerShell

CRM / ERP / CMS

1C, Terrasoft, Odoo/OpenERP, Bitrix, Drupal, Joomla

Driving: Category B license, own car

About Me

Hi, I'm Dmitry. I've gone from systems administrator to business co-owner and CEO/CIO. For the past 8+ years I've been fully focused on DevOps practices: containerizing applications with Docker and orchestrating them on Kubernetes and OpenShift, mainly in fintech projects. I aim to minimize time-to-market for the business and apply DevSecOps practices to improve the reliability of production systems. Open to interesting projects and long-term collaboration.
